*Alpert*

We have examined the supplementary information submitted with the letters of August 14 and December 4 from the petitioner, American Cyanamid Company. The additional information relates to further validation of the method of analysis and minor changes in the recommendations for use. We wish to reaffirm the opinion expressed in our memorandum of November 24, 1958 that the proposed tolerance reasonably reflects the amounts of residue likely to result from this use. This opinion is based on the assumption that the aeration received in the normal movement of grains after fumigation will reduce residues to below the tolerance level.
